INFORMATIONAL NOTIFICATION: DSB Changes to the UAT, UAT2 and Production Maintenance Window

Audience: All DSB Users

Dear Users,

Following a discussion with the DSB's Technology Advisory Committee in October 2024, the DSB will be altering the timing of the maintenance windows for UAT, UAT2 and Production. These changes will occur over a single weekend starting Saturday 31 May 2025.

These changes are required in order to make the Production environment available on Sunday which is a working day in Saudi Arabia. Saudi Arabia will shortly be announcing their UPI mandate.

The current maintenance windows for the three environments are as follows:

Environment	Maintenance Window
UAT	Saturday 00:30 UTC to 12:30 UTC
UAT2	Saturday 12:30 UTC to Sunday 00:30 UTC
Production	Sunday 00:30 UTC to 12:30 UTC

This release will change the timing for each environment as follows:

Environment	Maintenance Window
UAT2	Saturday 00:30 UTC to 12:30 UTC
Production	Saturday 12:30 UTC to Sunday 00:30 UTC

UAT

Sunday 00:30 UTC to 12:30 UTC

The necessary changes will be implemented during the existing maintenance windows on the weekends of May 31 and June 1, 2025. Please be aware that the updated maintenance windows will come into effect on the weekend of June 7 and 8, 2025

Implementation Timeline:

Date	Activity
May 31, 2025 (Saturday) 00:30 UTC to 12:30 UTC	Preliminary Deployment in the UAT Environment to accommodate the new maintenance window
May 31, 2025 (Saturday) 12:30 UTC to June 1, 2025 (Sunday) 00:30 UTC	Preliminary Deployment in the UAT2 Environment to accommodate the new maintenance window
June 1, 2025 (Sunday) 00:30 UTC to 12:30 UTC	Preliminary Deployment in the Production Environment to accommodate the new maintenance window
June 7, 2025 (Saturday) 00:30 UTC to 12:30 UTC	The new maintenance window for the UAT2 environment will be implemented as scheduled.
June 7, 2025 (Saturday) 12:30 UTC to June 8, 2025 (Sunday) 00:30 UTC	The new maintenance window for the Production environment will be implemented as scheduled.
June 8, 2025 (Sunday) 00:30 UTC to 12:30 UTC	The new maintenance window for the UAT environment will be implemented as scheduled.

Note: Given these changes, DSB anticipates a brief disconnection in the UAT, UAT2, and Production environments during the specified period while we transition to the new maintenance window.

Impact to Users:

Users who have scheduled jobs which align with the DSB's current maintenance windows will need to update their systems.

Action Required:

Users will be required to alter the timing of any jobs or references that align with the DSB's maintenance windows to ensure they are aligned with the new values. Please note that users may need to implement these changes prior to the DSB's changes.
